Community Analysis Support System

Market Findings

Area Monitoring

Methodology

Area Monitoring

- Medium length, in-depth interviews with beneficiaries of FCDO/LAMP programming and communities members living in areas of FCDO/LAMP programming
- Quantitative and qualitative responses
- Demographic information (age, gender, ethnic group, religion, displacement status)

Target of 200-250 respondents per area from Round 5

1. Household finances (income vs debt)
2. Preference for cash vs in-kind support
3. Nearby market accessibility
4. Availability of goods in nearby markets
5. Affordability of goods in nearby markets

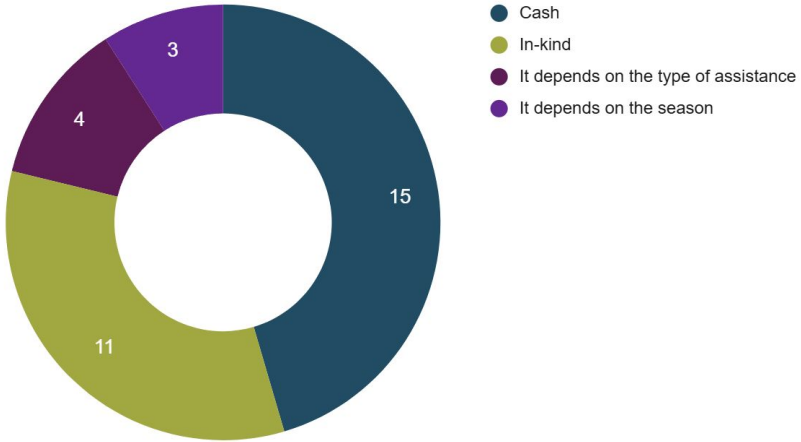

6. *Attempt collection of access to credit (from Round 5)*

Area Monitoring Round 4				
Kachin	Shan	Southeast	Northwest*	Rakhine
33	61	60	115	72

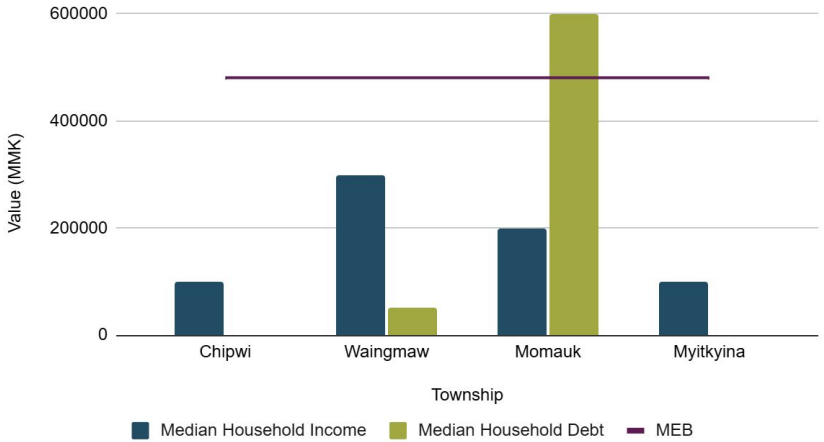

Kachin State

September - October 2024

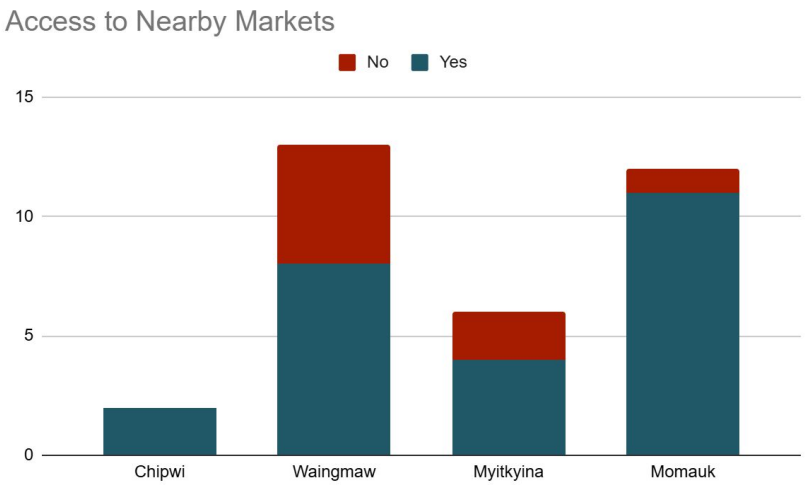

Preference for Cash or In-Kind Support

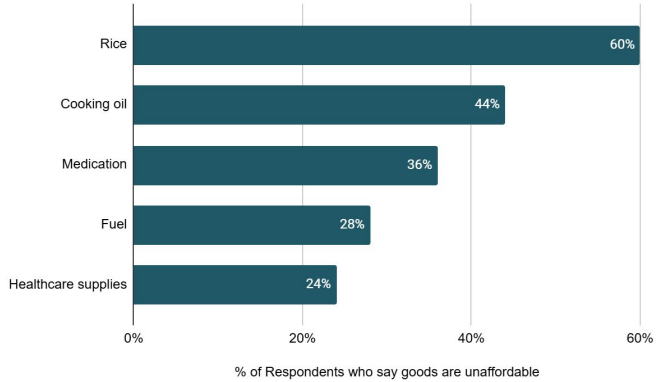

Median Household Income and Debt by Township and MEB

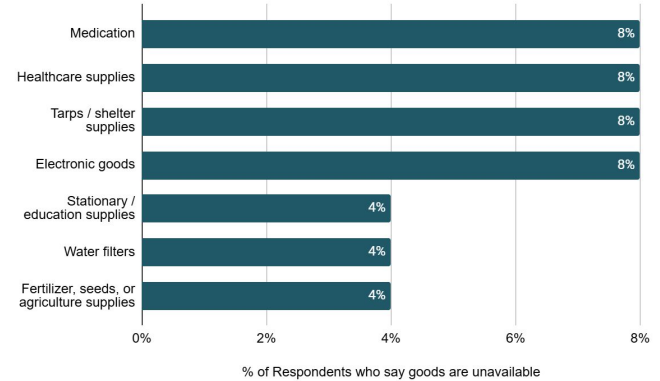

Kachin State

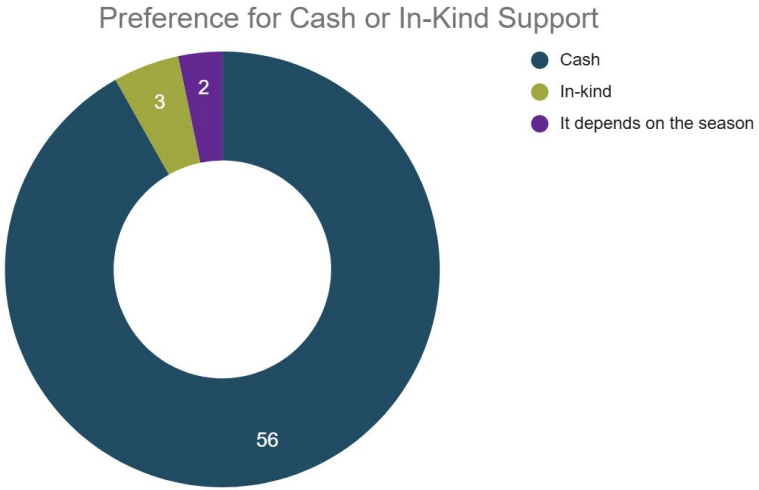

- No respondents said rice, cooking oil, or other food items are unavailable in local markets

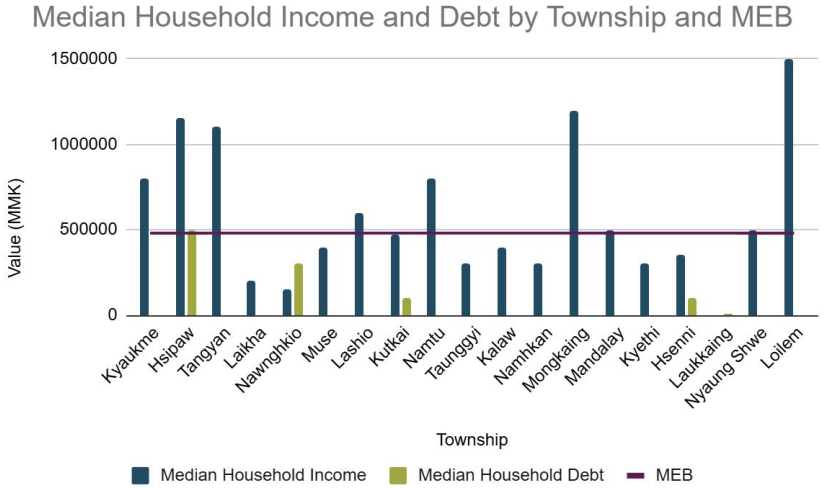

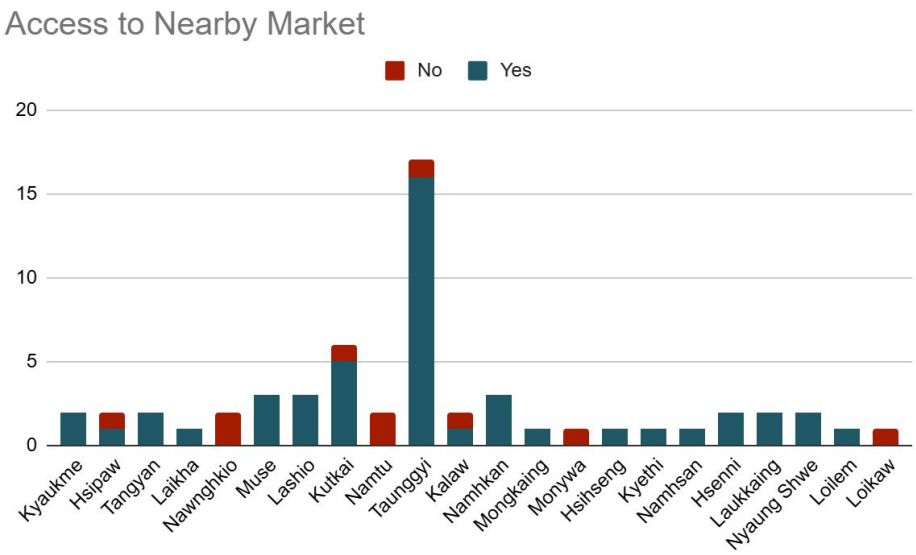

Shan State

October - November 2024

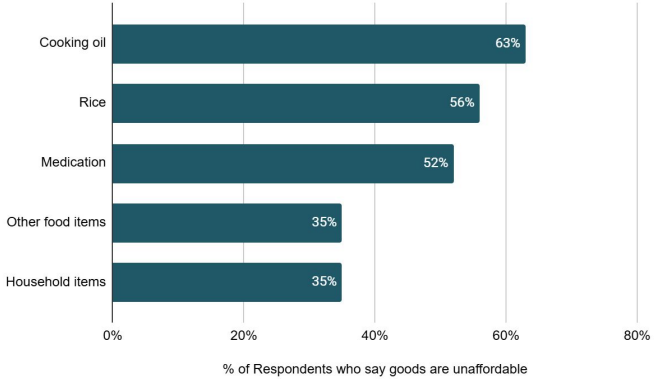

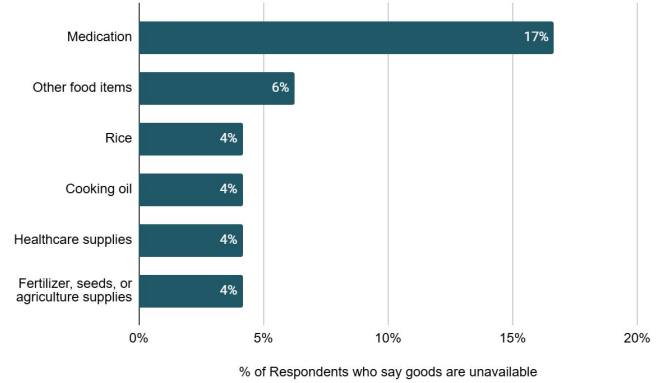

Shan State

- 2 respondents (of 2) in **Laukkaing Township** said rice, cooking oil, and other food items are not available in local markets

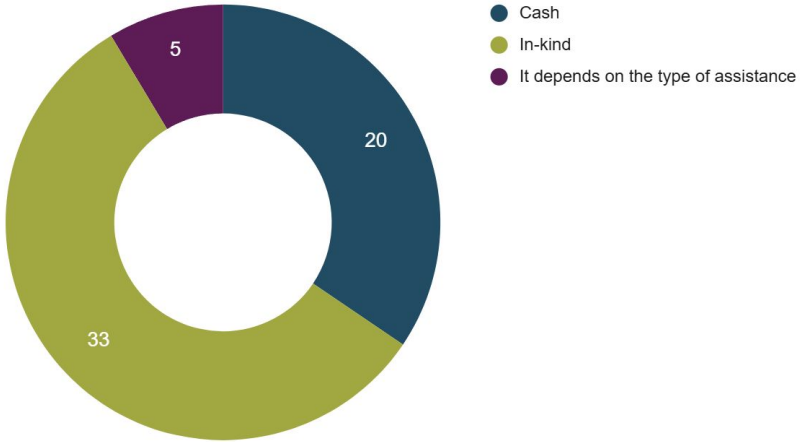

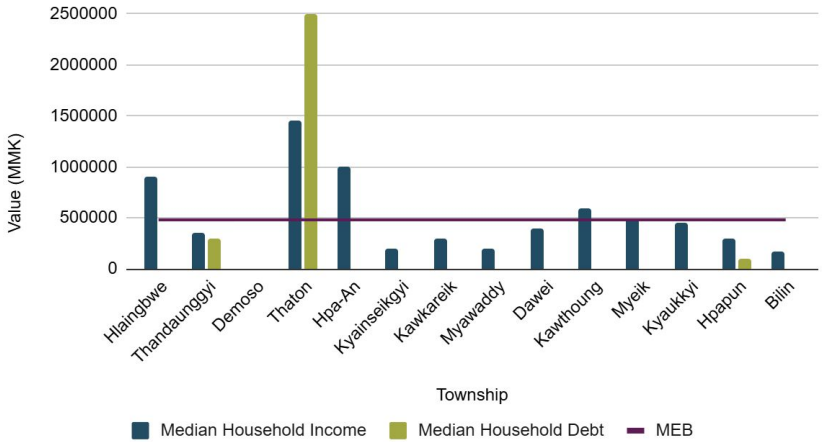

Southeast Myanmar

October - November 2024

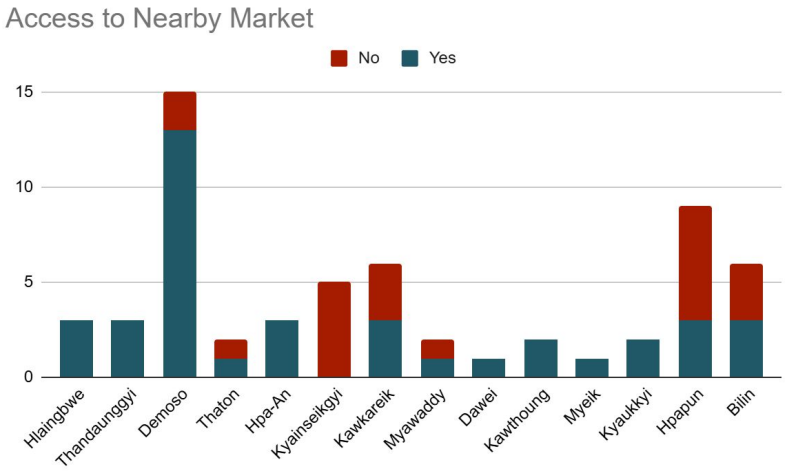

Preference for Cash or In-Kind Support

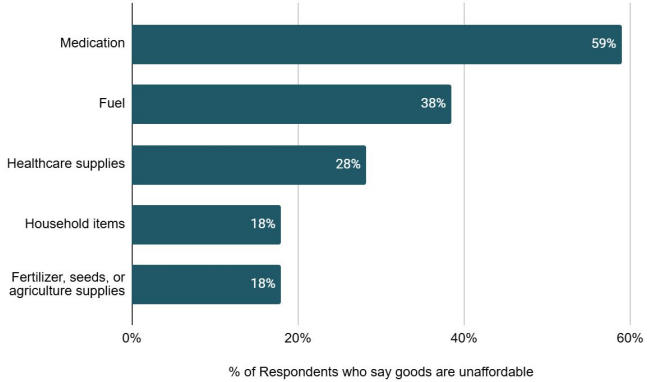

Median Household Income and Debt by Township and MEB

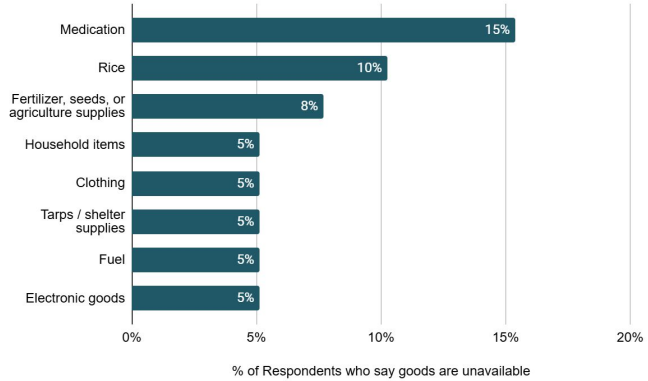

Southeast Myanmar

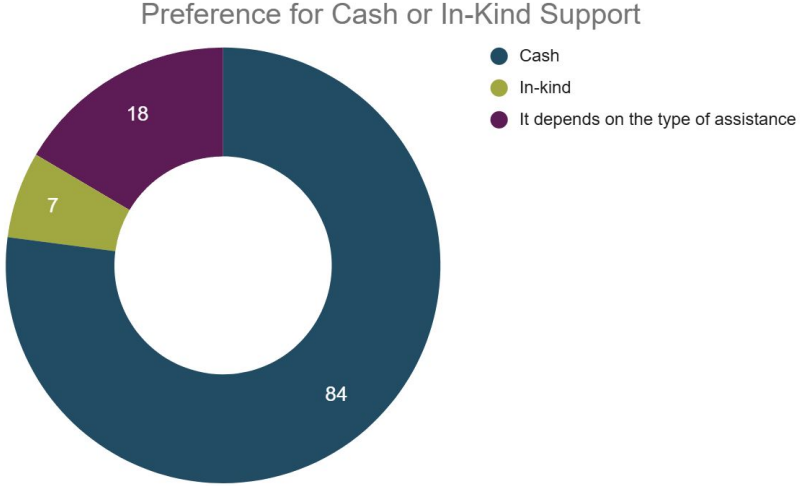

- 4 respondents (of 15) in **Demoso Township** said rice is not available in local markets
- Otherwise, lowest levels of unavailable goods of all five areas

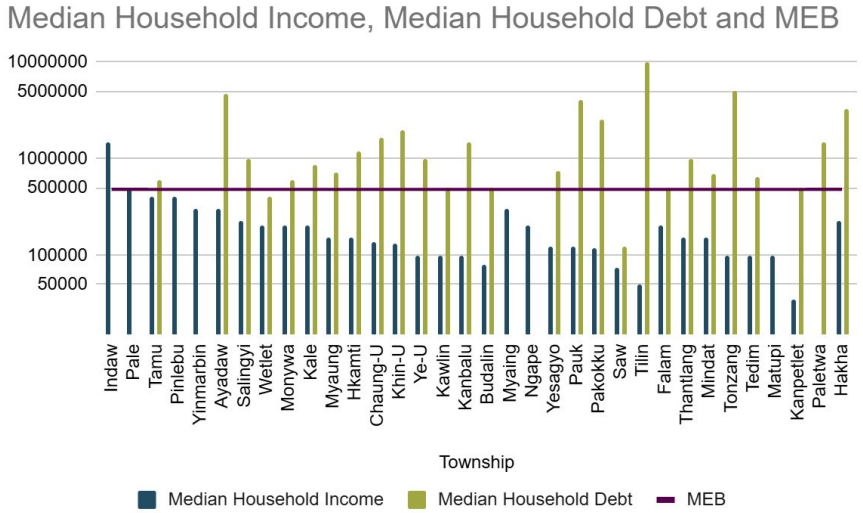

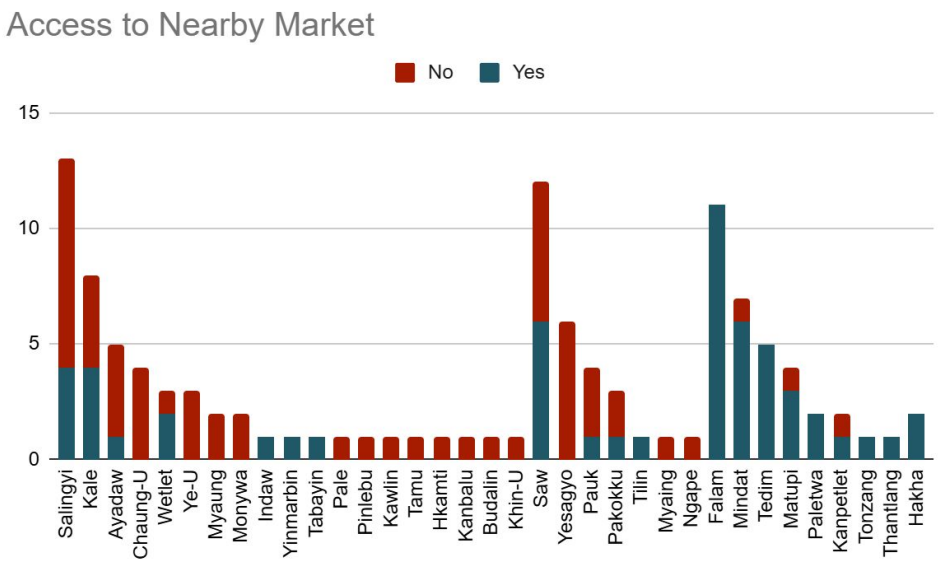

Northwest Myanmar

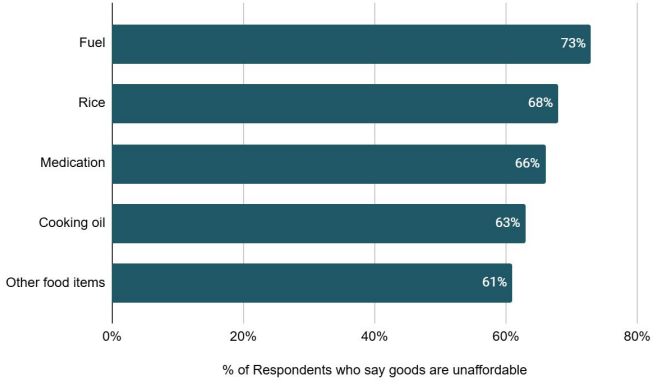

November 2024 - January 2025

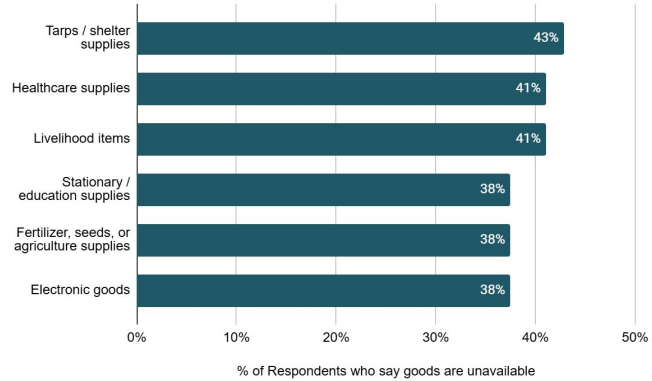

Northwest Myanmar

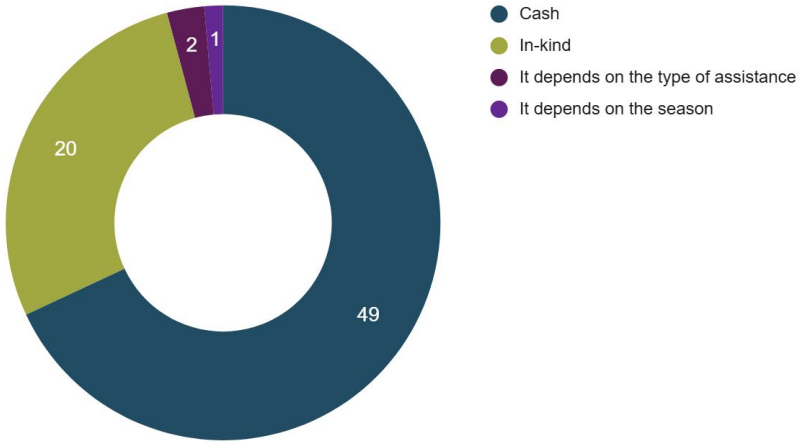

- One respondent each in **Matupi, Mindat, and Tedim Townships** said rice is not available in local markets
- Highest levels of people reporting goods unaffordable, particularly fuel
- Around **three-quarters of respondents in Sagaing (73%) and Magway (76%)** are unable to access a nearby market, compared to 9% in Chin State.

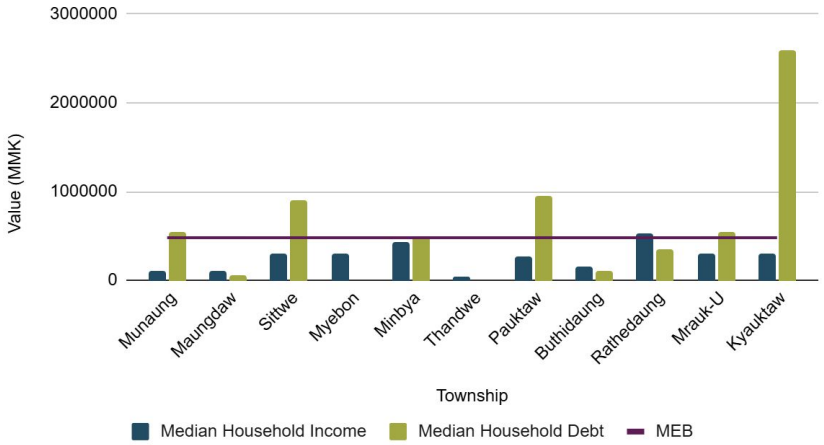

Rakhine State

December 2024 - January 2025

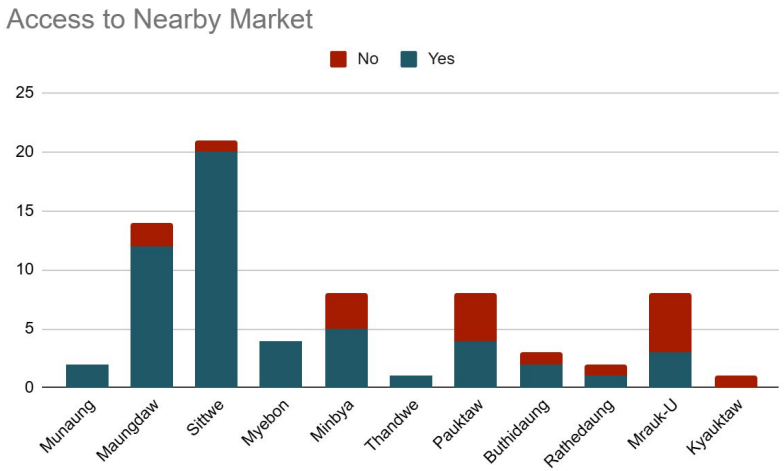

Preference for Cash or In-Kind Support

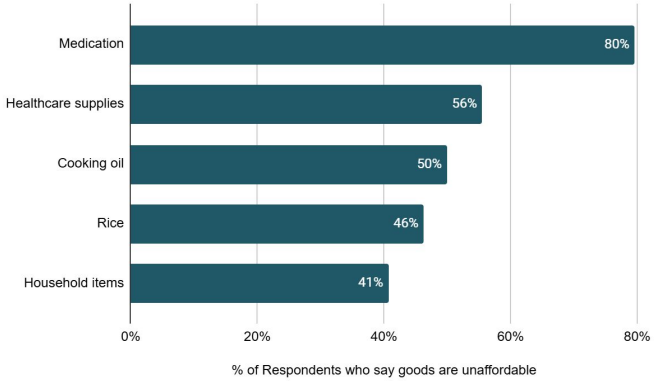

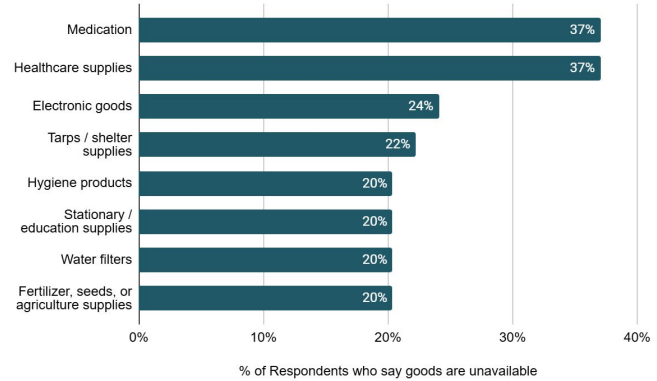

Median Household Income and Debt by Township and MEB

Rakhine State

- Medication and healthcare supplies the most unavailable and unaffordable
- No respondent said rice or cooking oil is unavailable

Rakhine State

PERCENTAGE OF RESPONDENTS THAT SAY GOODS ARE MISSING

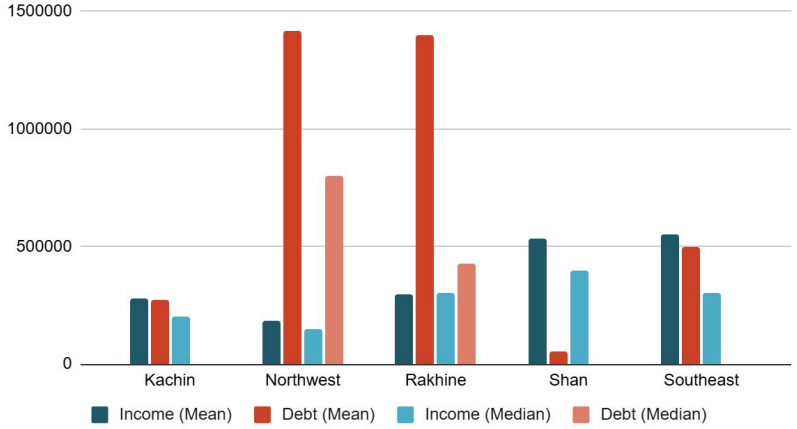

Township / Goods	Rice	Cooking oil	Other food items	Household items	Clothing	Medication	Healthcare supplies	Hygiene products	Tarps / shelter supplies	Stationary / education supplies	Water filters	Fuel	Fertilizer, seeds, or agriculture supplies	Electronic goods	Equipment	Livelihood items

Overall Trends

Average Household Income and Debt

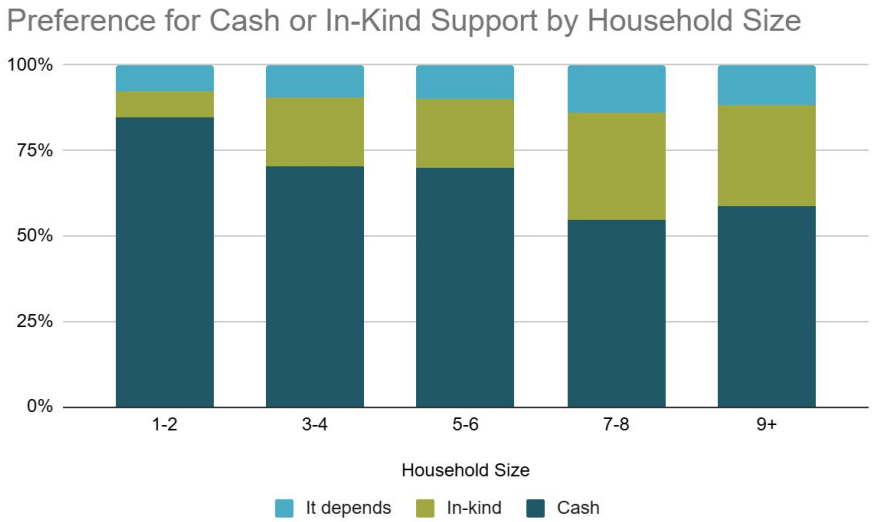

- Highest levels of debt seen in Northwest and Rakhine
- Lowest levels of debt seen in Shan
- Access to credit a key concern, to be monitored in Round 5
- However, debt data requires major caveats; may not be possible to collect effectively

Staple unaffordability by region

- Northwest sees most staple goods deemed unaffordable
- Southeast has lowest number of responses saying goods unaffordable, though relatively high for fuel and medication
- Rakhine and Northwest are the regions with the highest rates of reported goods unavailability

Overall Trends

- Larger households tend to express preference for in-kind aid
- The relationship in the data appears to be independent of household finances
- Can be explained by predominant model of support being to the household; the same amount of cash does not go as far for a larger household

Earthquake Assessment

Figure 5: Most Pressing Needs

Figure 6: Duration of Savings Amounts (Sagaing, Magway, and Mandalay regions)

- Cash and livelihood support were identified as the most pressing needs by those in more severely impacted areas, including Sagaing, Magway, and Mandalay regions.
- Cash as the most pressing need in both Mandalay and Magway regions, reported by 30% and 24% of respondents,
- Critical Point: ~70% of most affected areas have 1 week or less of cash savings

Earthquake Assessment

Figure 7: Food Stores or Markets Open

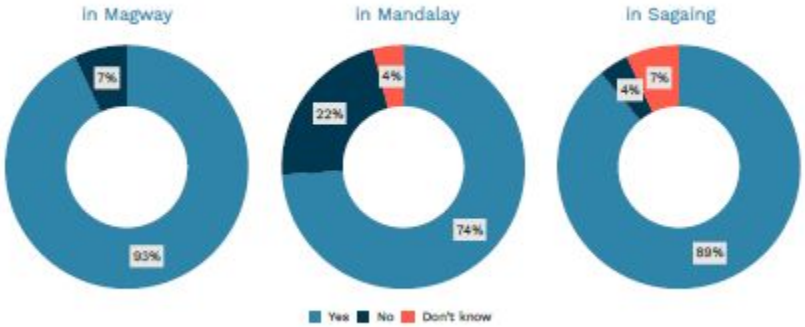

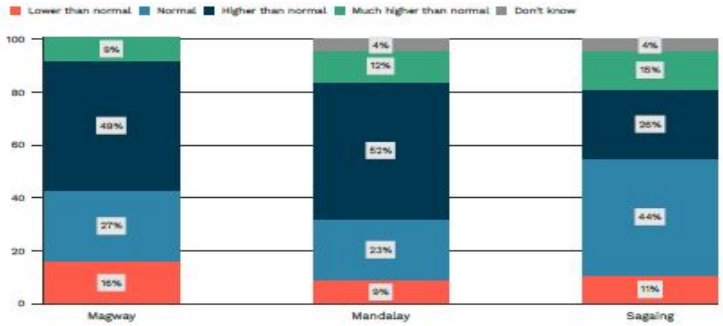

Figure 9: Cost of Food

- In Mandalay Region specifically, more than half of respondents (52%) reported that the cost of key food items was higher than normal
- Market damage or destruction was reported by 36% of all respondents in Mandalay
